The Flightcell[®] Iridium 9505/A Phone Mount

The Flightcell® Iridium 9505/A Phone Mount

Built to last:

The new Iridium 9505/A Mount from Flightcell International is lightweight but its alloy frame is as solid as you can get. Because it is built to milspec standard and rated to 16G for the extremes of military use, you can be sure that your 9505 and 9505A will stay put in this mount in the toughest situations, in the air, on land or at sea.

Easy to use:

The Flightcell Iridium 9505/A Mount combines strength with ease of use. To mount your phone, just clip it into place and lower the retaining latch. Simply flip up the retaining latch, push the antenna release button on your 9505 and your phone is portable once again.

Fully self-contained and connected:

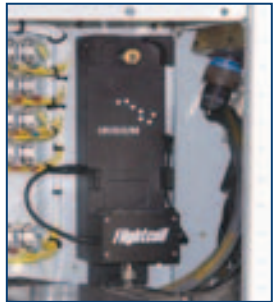

The Flightcell Iridium 9505/A Mount is fully self contained, with inbuilt TNC antenna, data and direct power supply connections. Flightcell has designed this new mount for convenient integration into existing voice systems, or as part of the new built in Flightcell DZM voice, tracking and data integration system. The DZM system fully integrates your portable Iridium phone into any onboard comms or intercom system. Flightcell DZM controls all functions of the remotely located mount and phone including power on/off, number dialling, data transfer, and SMS functions.

Remote location Iridium phone mounting

With the Flightcell DZM installed, your Iridium phone can be mounted anywhere on the aircraft, out of the way. Simply dial from the DZM panel.

For further information on Flightcell DZM please email info@flightcell.com or visit our website:
