Guardian Mobility Equips Nigerian Civil Aviation Authority (NCAA) with Nation's Aircraft Monitoring Center

Guardian Mobility to supply aircraft tracking devices and mapping for Nigeria's aircraft operators

Ottawa, ON, Canada, April 12, 2010 – Guardian Mobility announced its role as primary subcontractor to Globaltouch (West Africa) Limited to provide Guardian mapping and aircraft tracking solutions to aircraft operators in Nigeria. Globaltouch (West Africa) is the sole supplier for aircraft tracking in Nigeria with a satellite ground station located on Nigerian soil. The company has been awarded a contract by the NCAA to construct its primary aircraft monitoring facility at NCAA headquarters in Abuja where aircraft will be monitored using Guardian Mapping.

Guardian Mobility devices will be installed on fixed wing and rotary aircraft throughout Nigeria. Guardian Mobility has the ability to outfit a wide range of aircraft with portable or fixed devices and a variety of antenna configurations. Guardian 3, the world's most widely used portable aircraft tracking device, has been recently improved with enhanced firmware and features flexible installation options for fixed wing and helicopter operators.

Flight tracking is now mandated in Nigeria on all registered aircraft to improve air travel and aviation safety. Aircraft operators will benefit from this country-wide implementation with the derived ability to obtain current and historical location and status information on their entire fleet of aircraft with Guardian Mapping. The introduction of aircraft tracking will permit operators to implement fleet management solutions and to experience enhanced operations and improved profitability.

About Globaltouch

Globaltouch (West Africa) Limited is a company licensed by the Nigerian Communications Commission (NCC) to offer mobile satellite communications products and services. Through a dedicated satellite earth station in Kaduna, Globaltouch provides highly reliable 24/7 satellite tracking services to the NCAA and other customers across West Africa. Globaltouch provides a full range of tracking devices suitable for aviation. Website: www.globaltouchwa.com

About Guardian Mobility

Guardian Mobility offers a full range of GPS tracking and satellite communications solutions for aircraft, devices that run on the Iridium and Globalstar satellite networks. In 2004, Guardian introduced the first portable GPS tracking device for aircraft, which helped fleet operators know the status and location of their aircraft at any given moment. In 2009, Guardian introduced an aircraft communication device with two way text messaging and data relaying capabilities which helps operators increase efficiencies and reduce costs. Guardian's products are approved for Automatic Flight Following (AFF) and used by forestry contractors worldwide. Website: www.guardianmobility.com
