Guardian Mobility to Attend Helitech 2009 in England

Swedish fleet among those benefitting from greater map detail for helicopter tracking

Ottawa, ON, Canada, August 18, 2009 – Guardian Mobility announced today that it will attend Helitech in England from September 22 to 24, 2009 (<http://www.helitech.co.uk>). Visit Guardian in booth 1717.

Guardian looks forward to connecting at the show with some of its global customers, including Jämtlands Flyg AB, a company from Sweden who is using Guardian's flight tracking products and services.

Jämtlands uses its fleet of five helicopters for power line inspection and construction, forestry inspection, commercial air transport, and transporting customers to remote hunting and fishing camps. After unsatisfactory testing of several other tracking solutions, Jämtlands selected the Guardian 3i on the Iridium network to equip their fleet. The company operates in the remote and mountainous regions of Scandinavia and cannot rely on GSM or other types of coverage for fleet management. ,

"The Guardian 3i is the only way to go when you cross borders or operate in remote regions," said Jon Håkansson, Chief Operating Officer of Jämtlands.

Guardian's flexible mapping solution, versatile hardware and reliable network coverage creates a cost efficient solution for any aircraft fleet operator worldwide. With recent improvements to Guardian's advanced mapping in European regions, Håkansson states that, "Guardian has delivered excellent mapping detail for Europe, to our colossal satisfaction."

About Guardian Mobility Products

Guardian Mobility offers aircraft communication and tracking products and services. The Guardian 7 product line is a modular system featuring a two-way text messaging unit with the ability to automatically route data from on-board partner applications. The Guardian 3 product family includes satellite GPS devices for both the Globalstar and Iridium satellite networks to suit aircraft operators' needs. All Guardian Mobility products offer a variety of antenna and device configurations for portable and mounted installations. Flexible airtime packages are designed with the needs of aircraft operators in mind and added services include advanced web-based mapping and customizable alerts.

About Guardian Mobility

Guardian Mobility offers a full range of GPS tracking and satellite communications solutions for aircraft, devices that run on the Iridium and Globalstar satellite networks. In 2004, Guardian introduced the first portable GPS tracking device for aircraft, which helped fleet operators know the status and location of their aircraft at any given moment. In 2009, Guardian introduced an aircraft communication device with two way text messaging and data relaying capabilities which helps operators increase efficiencies and reduce costs. Guardian's products are approved for Automatic Flight Following (AFF) and used by forestry contractors worldwide.
