## **Guardian Mobility Releases New Corporate Website**

### **New website offers better user experience for its general aviation customers**

*Ottawa, ON, Canada, August 25, 2010* – Guardian Mobility announced today the release of its new corporate website targeted at providing flight data solutions to the general aviation market. The new site offers more comprehensive product pages, a Media Room, and information targeted at specific operator types.

“We know that this new site will offer a better user experience for current and potential customers, giving better insight into Guardian’s flight data solutions,” says Jim Ballingall, Guardian’s Vice President of Sales and Marketing. “The website will take its users through every component of each end-to-end solution in a way that is more organized, more accessible and easier to understand.”

The new corporate site is aligned with Guardian Mobility’s corporate strategy, using a solutions-based approach to communicate how they solve customers’ problems. The look and feel of the site has been updated to be fresh and reflective of the innovative culture of the company. New functionality will continue to be added to the site over time including Guardian’s new online store which is coming soon.

Visit the site to see how Guardian’s solutions are solving age-old problems in the aircraft industry. For example, [click here](#) to learn about how the Guardian 7 OOOI-enabled solution reduces the need for data entry and improves the accuracy of records.

### **About Guardian Mobility Products**

Guardian Mobility offers aircraft communication and tracking products and services. The Guardian 7 product line is a modular system featuring a two-way text messaging unit with the ability to automatically route data from on-board partner applications. The Guardian 3 product family includes satellite GPS devices for both the Globalstar and Iridium satellite networks to suit aircraft operators’ needs. All Guardian Mobility products offer a variety of antenna and device configurations for portable and mounted installations. Flexible airtime packages are designed with the needs of aircraft operators in mind and added services include advanced web-based mapping and customizable alerts.

### **About Guardian Mobility**

Guardian Mobility offers a full range of GPS tracking and satellite communications solutions for aircraft, devices that run on the Iridium and Globalstar satellite networks. In 2004, Guardian introduced the first portable GPS tracking device for aircraft, which helped fleet operators know the status and location of their aircraft at any given moment. In 2009, Guardian introduced an aircraft communication device with two way text messaging and data relaying capabilities which helps operators increase efficiencies and reduce costs. Guardian’s products are approved for Automatic Flight Following (AFF) and used by fleet operators worldwide.
