## **Guardian Mobility to Exhibit at Heli-Expo 2010**

### **Company celebrates 5<sup>th</sup> year at show with customer party, launch of new product**

*Ottawa, ON, Canada, February 18, 2010* - Guardian Mobility is exhibiting at HAI's Heli-Expo 2010 in Houston, Texas, from February 21 to 23, in **Booth # 3040**. Guardian Mobility is looking forward to celebrating its fifth year at Heli-Expo with a special event for customers and partners on the Monday, and with the launch of a new product to be unveiled at its booth.

"Helicopter operators were early and enthusiastic customers when we launched the first portable tracking device for aircraft," said Jean Carr, Guardian Mobility president and CEO. "We look forward to this show to meet our longstanding customers, and discuss how we can meet their evolving needs. Of course this is the natural venue for us to launch our newest product."

Guardian will be demonstrating our Guardian 3 product line and Guardian Mapping varieties. The company will also be launching a new product geared to meeting aircraft operators evolving needs. Be sure to stop by booth # 3040 and see what's new from Guardian Mobility.

#### **About Guardian Mobility Products**

Guardian Mobility offers aircraft communication and tracking products and services. The Guardian 7 product line is a modular system featuring a two-way text messaging unit with the ability to automatically route data from on-board partner applications. The Guardian 3 product family includes satellite GPS devices for both the Globalstar and Iridium satellite networks to suit aircraft operators' needs. All Guardian Mobility products offer a variety of antenna and device configurations for portable and mounted installations. Flexible airtime packages are designed with the needs of aircraft operators in mind and added services include advanced web-based mapping and customizable alerts.

#### **About Guardian Mobility**

Guardian Mobility offers a full range of GPS tracking and satellite communications solutions for aircraft, devices that run on the Iridium and Globalstar satellite networks. In 2004, Guardian introduced the first portable GPS tracking device for aircraft, which helped fleet operators know the status and location of their aircraft at any given moment. In 2009, Guardian introduced an aircraft communication device with two way text messaging and data relaying capabilities which helps operators increase efficiencies and reduce costs. Guardian's products are approved for Automatic Flight Following (AFF) and used by forestry contractors worldwide.
