

Guardian Application Provisioning Portal (GAPP)

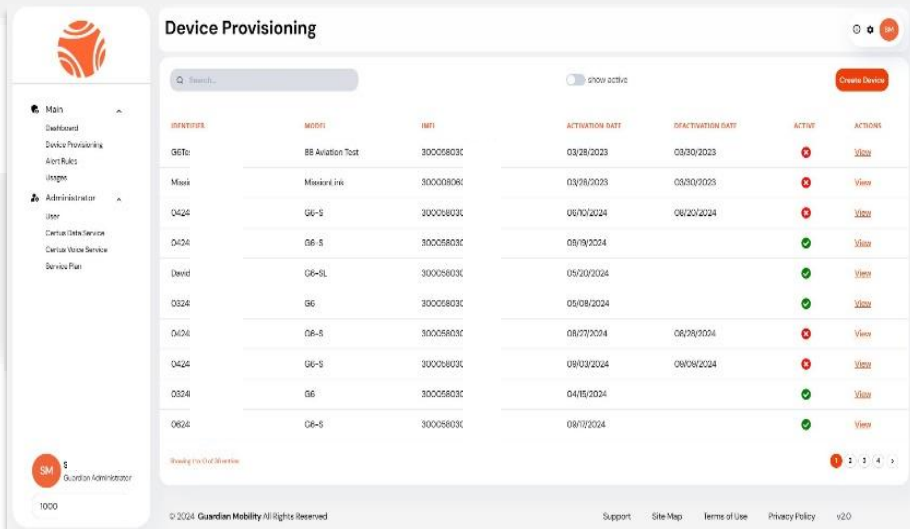

A powerful, web-based application that offers a new approach to managing your Iridium Certus® airtime and network security.

GAPP Features

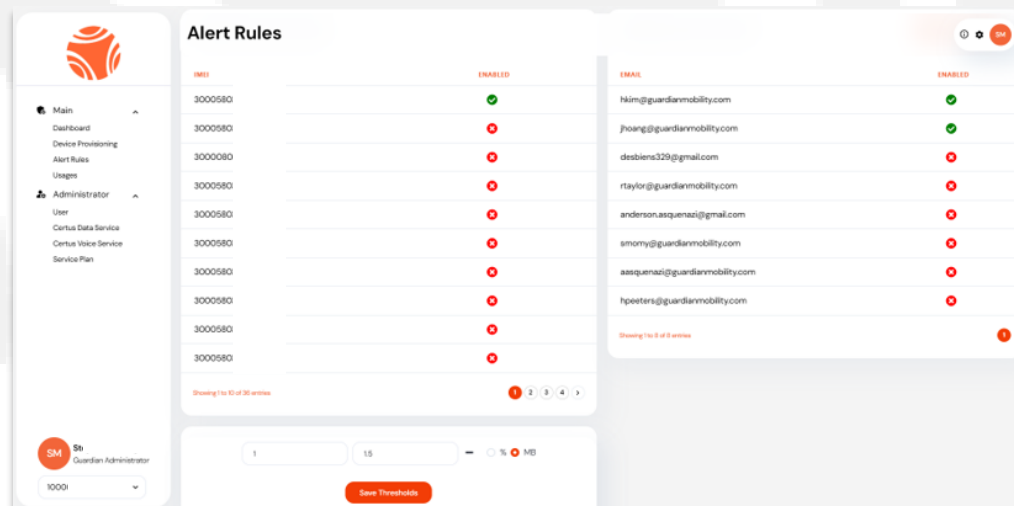

Partner with Guardian Mobility and leverage GAPP to easily manage the provisioning, deactivations, and data management for your clients' Iridium Certus® solutions.

✓ **Dashboard at a Glance.** The secure platform is accessible from the internet and has optional 2-factor authentication for enhanced security and restricted access. The dashboard view provides a quick overview of device status and device status and data use notifications.

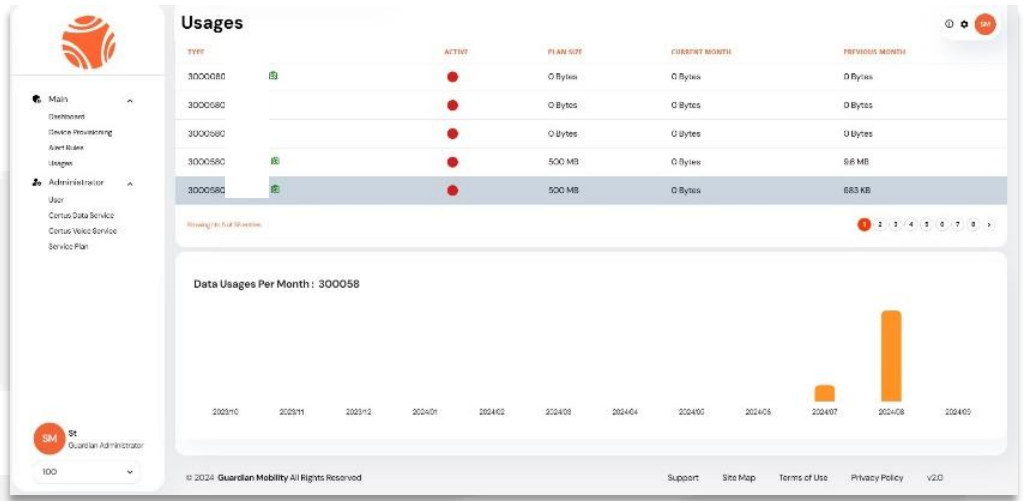

✓ **Device Activation/Deactivation.** Easily activate a device with an IMEI, ESN (serial number), SIM number, tail no. and the device model. Deactivation can be done with one click followed by a verification step.

✓ **Alert Rules.** Set data limits and receive notifications either based on a percentage of the selected plan or by the amount of data used (MB).

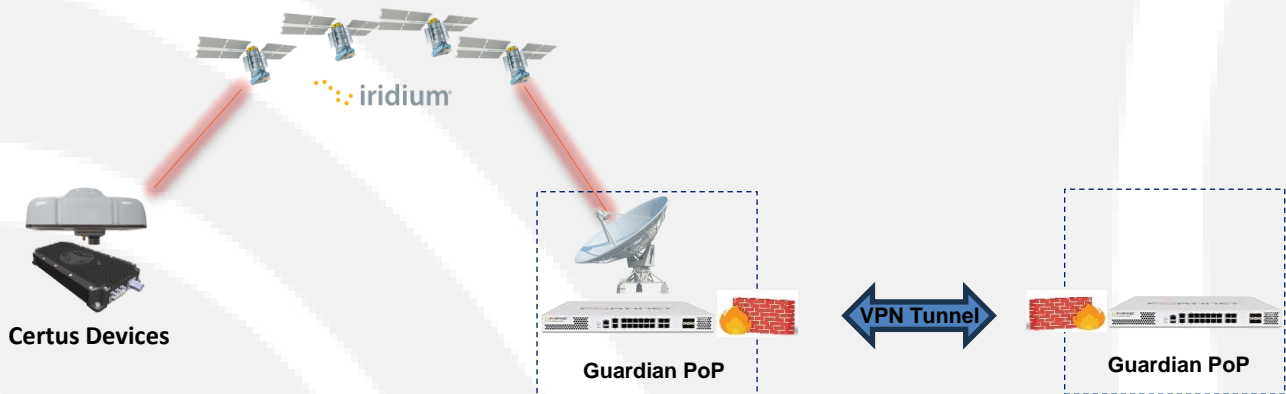

- ✓ **Usages.** Get full visibility over your clients' sub-account data usage.

- ✓ **Administration/User:** Set different user levels, ranging from full administration of all accounts and devices to limited access, such as managing a specific device.

Network Security Features.

Guardian Mobility has invested in co-location services at the Iridium® Gateway to ensure full control over all Iridium® data traffic from the Iridium® NEXT satellite constellation.

Flexible Connectivity Options:

1. Provide a client VPN from the Guardian Point of Presence (PoP).
2. Provide a tunnel VPN (private network) from the Guardian PoP.
